EDUCATION

University of Connecticut, Storrs, CT

August 2024 - May 2026

Bachelor of Science, Computer Science and Engineering (Artificial Intelligence)

Minor in Mathematics | Cumulative GPA: 3.3

Connecticut State Community College, Bridgeport, CT

August 2022 - May 2024

SKILLS

Programming: Python, SQL, R, TypeScript, JavaScript

Cloud & Databases: AWS (Lambda, Glue, API Gateway, S3, DynamoDB, CloudWatch, Redshift), PostgreSQL, Supabase

Framework & Tools: React, FastAPI, Git, GitHub, **GitHub Actions**, **CI/CD**, Jira, Tableau, Excel (PivotTables, Power Query), PowerShell

Libraries: Pandas, NumPy, Matplotlib

EXPERIENCE

IT Data Analyst Intern

Nassau Financial Group | June 2026 - August 2026

- Developed SQL queries to analyze, validate, and transform enterprise data supporting reporting, data quality, and business decision-making.
- Worked with AWS cloud services including Lambda, Glue, API Gateway, S3, DynamoDB, and CloudWatch to support enterprise data solutions.
- Performed data mapping between enterprise systems to improve data integration and maintain data consistency.
- Enhanced an existing PowerShell automation script, increasing processing efficiency by 40%.

IT Help Desk Intern

Connecticut State Community College | Summer 2025

- Delivered technical support for hardware, software, and network issues to students, faculty, and staff.
- Installed, configured, and deployed computers and peripherals while troubleshooting technical issues.

NEXT 25 Summer Program

The Cigna Group | Summer 2025

- Collaborated on an Agile team to develop a cloud-based wellness application promoting healthy sleep habits.
- Developed the Dream Journal feature using React, TypeScript, and Amazon DynamoDB.

Team Lead

Panera Bread | May 2022 - August 2024

- Supervised daily operations, trained new employees, and maintained high customer service standards in a fast-paced environment.
-

PROJECTS

Enterprise Procurement Automation Platform | Python, React, Electron, FastAPI, OCR, Local LLMs

- Served as team manager for a three-person senior design team sponsored by TE Connectivity, coordinating project planning, task delegation, and stakeholder communication throughout the software development lifecycle.
- Developed an AI-powered desktop application that automates the extraction of structured data from supplier quotes and purchase orders, reducing manual data entry and streamlining procurement workflows.
- Engineered an intelligent document-processing pipeline using PyMuPDF, Tesseract OCR, and local LLMs to extract and validate information from both digital and scanned PDFs, exporting standardized JSON and CSV outputs for downstream automation.

Formula 1 Analytics Dashboard | Python, Tableau

- Built a Python-based analytics pipeline to clean, transform, and analyze over 40,000 Formula 1 pit stop records before creating an interactive Tableau dashboard.

Sleep Journal Web Application | React, TypeScript, AWS DynamoDB

- Developed the Dream Journal feature for a three-tier web application using React and TypeScript, deployed on AWS. Integrated Amazon DynamoDB for secure, scalable storage of user dream logs, ensuring efficient data retrieval and management through AWS services.
